AUXR

Auxite Reserve Index

A NAV-Referenced Multi-Metal Basket Token

Issued by Aurum Ledger Ltd · Network: Base (chainId 8453) · Version 2.1 · October 2026

---

1. Executive Summary

AUXR (Auxite Reserve Index) is a NAV-anchored digital reserve token representing a diversified basket of four monetary and industrial precious metals — gold, silver, platinum and palladium. AUXR is engineered to give holders a single, liquid, exchange-tradable instrument whose value tracks the net asset value (NAV) of a professionally managed, transparently priced metal basket.

Unlike single-metal allocation tokens, AUXR is not backed by allocated physical metal. It is a NAV-referenced basket token: its value tracks the basket at live global spot prices, and it is settled in value terms at NAV rather than redeemed for physical bars. This allows AUXR to trade on centralized exchanges without per-trade physical settlement costs.

AUXR is the reserve-index member of the Auxite token family. The single-metal tokens — AUXG, AUXS, AUXPT and AUXPD — remain physically allocated, mint-on-allocation / burn-on-redemption instruments. AUXR sits above them as the diversified, market-traded reserve unit anchored to the same underlying metal-price infrastructure.

Official disclosure: AUXR is a basket token whose NAV tracks a 55/30/10/5 Au/Ag/Pt/Pd basket at global spot. It is not backed by allocated physical bullion and is not individually redeemable for physical metal. The issuer intends to hedge its net metal exposure through regulated counterparties; as of the date of this version, that hedging programme is being established and is not yet operational. Reserve figures published by the issuer are self-reported and have not been verified by an independent auditor, custodian or insurer.

2. Token at a Glance

Token name	**Auxite Reserve Index**
Symbol	AUXR
Network	Base (Ethereum L2, chainId 8453)
Standard	ERC-20

Contract address	0xB145B8e9C02193d55454f534f917Cabe704FA042
Admin / owner	Gnosis Safe multisig 0xEdC9163c5f8A2a76BD1CdDa6BAA4Eb576B481070
Decimals	18
Underlying	Basket: 55% Gold · 30% Silver · 10% Platinum · 5% Palladium (USD-value weights)
Reference NAV	USD 100.00 per AUXR at launch
Valuation	Net Asset Value (NAV) per token, from live metal spot applied to fixed basket grams
Settlement	Cash-settled at NAV; not physically redeemable
Spread	125 bps each side (2.5% round-trip) on issuance and redemption in the Auxite app
Issuer	Aurum Ledger Ltd
Jurisdiction of offering	Regulation S (offshore); United States persons geo-fenced / excluded

3. Design & Backing Model

3.1 The Basket

AUXR represents a fixed-composition basket of four precious metals, weighted by USD value at launch reference prices. Gold anchors the basket as the store-of-value core; silver adds liquidity and industrial-demand exposure; platinum contributes auto-catalyst beta; palladium is a small tail position. The result is a reserve unit with lower single-metal volatility than any one constituent held alone. Weights are immutable in Phase 1A; any rebalance requires a separate governance event.

Basket composition (reference NAV of USD 100.00 per AUXR at launch):

Metal	USD Weight	Launch Price ($/g)	Grams per AUXR
Gold	55%	145.00	0.3793
Silver	30%	2.26	13.2743
Platinum	10%	60.00	0.1667
Palladium	5%	45.00	0.1111

Note: USD weights drift naturally with spot prices after launch; the gram quantities per AUXR are fixed. NAV per token floats with live metal spot prices applied to these fixed grams.

3.2 Backing and Hedging Status

The issuer plans to manage the metal-price exposure created by outstanding AUXR on a net-asset basis through:

- Unallocated metal positions with regulated bullion counterparties.
- Exchange-traded or OTC derivatives (futures / forwards) through a regulated brokerage partner, to keep exposure aligned with the basket weights.

Status as of this version: this hedging programme is being established and is not yet operational. Until it is, the issuer's obligations to AUXR holders are not matched by dedicated hedge positions, and holders rely on the issuer's ability to settle at NAV. AUXR is not individually redeemable for physical bars and is settled in value terms at NAV. The issuer will update this document when hedging becomes operational.

3.3 Net Asset Value

NAV per AUXR token is derived from live metal spot prices applied to the fixed basket grams and is published on a continuous basis. NAV is the reference price for primary issuance, market-making and any cash settlement.

4. Custody & Reserves

AUXR is not held in physical custody on behalf of holders. The issuer's planned hedging arrangements are described in Section 3.2 and are not yet operational. The issuer publishes self-reported reserve data at auxite.io/proof-of-reserves; these figures have not been independently verified. The single-metal Auxite tokens (AUXG/AUXS/AUXPT/AUXPD) remain fully physically allocated and non-fractional; AUXR differs in that it is a cash-settled reserve index rather than a physical warehouse receipt.

5. Market Structure & Liquidity

AUXR is designed for centralized-exchange listing with professional market-making. A market maker provides two-sided liquidity anchored to the published NAV, designed to keep spreads tight and price discovery orderly. Because AUXR is cash-settled at NAV rather than per-trade physically settled, secondary-market volume can scale without proportional physical logistics cost.

6. Compliance & Regulatory Posture

- Offering conducted under Regulation S (offshore). United States persons are geo-fenced and excluded from regulated features at the application layer.
- Full AML/KYC and sanctions screening applied to all onboarded users.
- Multi-jurisdiction application support (six languages) with jurisdiction-aware access controls.
- Issuer operates through Aurum Ledger Ltd with defined governance over treasury and reserve policy.

7. Governance & Contract Security

The AUXR contract is administered by a Gnosis Safe multisig (0xEdC9163c5f8A2a76BD1CdDa6BAA4Eb576B481070), requiring multiple authorized signatures for any privileged action. Issuance and redemption of primary AUXR are controlled by the issuer. The contract is deployed and verified on Base mainnet.

8. Risk Factors

- Market risk — the value of AUXR moves with precious-metal prices and basket weighting.
- Hedging risk — the issuer's hedging programme is not yet operational; until it is, AUXR obligations are not matched by hedge positions. Once in place, derivative hedges may diverge from spot.
- Issuer and counterparty risk — holders rely on the issuer's ability to settle at NAV, and on brokerage and market-making partners.
- Liquidity risk — secondary-market depth depends on the designated market maker and exchange demand.
- Regulatory risk — changes in the treatment of tokenized RWAs across jurisdictions.
- Technical risk — smart-contract and infrastructure risk inherent to on-chain instruments.

9. Disclaimer

This document is provided for information purposes only and does not constitute an offer or solicitation to any person in any jurisdiction where such offer or solicitation is unlawful. AUXR is offered under Regulation S and is not available to United States persons. Precious-metal and digital-asset investments carry risk, including loss of capital. Nothing herein is financial, legal or tax advice. Figures, addresses and structure are current as of the version date and subject to change.
