AUXR

Auxite Reserve

A NAV-Referenced Multi-Metal Basket Token

Issued by Aurum Ledger Limited · Network: Base (chainId 8453) · Version 2.2 · November 2026

---

1. Executive Summary

AUXR (Auxite Reserve) is an ERC-20 token on Base whose reference value is the net asset value (NAV) of a fixed basket of four precious metals: gold, silver, platinum and palladium. NAV is calculated by applying live metal spot prices to fixed gram quantities and is published on a public endpoint. AUXR gives holders price exposure to that basket through a single transferable token. "Reserve" is part of the token's on-chain name; it does not mean that AUXR is backed by a reserve of metal.

AUXR is not backed by allocated physical metal. It is settled in value terms at NAV, less the applicable spread, and cannot be redeemed for physical bars. Holders therefore rely on the issuer's ability to settle.

The single-metal Auxite tokens (AUXG, AUXS, AUXPT and AUXPD) are separate instruments with their own whitepaper. The issuer describes them as physically allocated, minted on allocation and burned on redemption. That description has not been independently verified, and this document does not cover those tokens.

Official disclosure: AUXR is a basket token whose NAV tracks a basket weighted 55/30/10/5 Au/Ag/Pt/Pd at launch. It is not backed by allocated physical bullion and is not redeemable for physical metal. The founder states that the issuer's exposure is hedged manually through banks in basket proportions; no hedge statement has been published or independently verified. The issuer's public AUXR reserves report currently shows no holdings statement and does not show AUXR as fully backed. No reserve figure has been verified by an independent auditor, custodian or insurer, and no independent smart-contract audit has been published. Security incidents in October 2026 are described in Section 7.1.

2. Token at a Glance

Token name	**Auxite Reserve**
Symbol	AUXR

Network	Base (Ethereum L2, chainId 8453)
Standard	ERC-20
Contract address	0xB145B8e9C02193d55454f534f917Cabe704FA042
Admin / owner	2-of-3 Safe multisig 0xEdC9163c5f8A2a76BD1CdDa6BAA4Eb576B481070 (admin, minter and pauser roles)
Decimals	18
Underlying	Fixed gram basket; USD-value weights at launch: 55% gold, 30% silver, 10% platinum, 5% palladium
Reference NAV	USD 100.00 per AUXR at launch
Valuation	Net Asset Value (NAV) per token, from live metal spot applied to fixed basket grams
Settlement	In value terms at NAV less spread; not physically redeemable
Spread	Retail app: 125 bps each side (2.5% round-trip). Registered authorised participants: 25 bps each side
Issuer	Aurum Ledger Limited (Hong Kong, Company No. 79809097)
Jurisdiction of offering	Regulation S (offshore); not offered to United States persons (see Section 6)
Supply	Open-ended, with a contract hard cap of 1,000,000,000 AUXR. Live data: vault.auxite.io/api/supply?symbol=AUXR

3. Design & Backing Model

3.1 The Basket

AUXR references a fixed-composition basket of four precious metals, weighted by USD value at launch reference prices. The gram quantities per token are fixed in this version. Any change would require a separate governance event and an update to this document.

Basket composition (reference NAV of USD 100.00 per AUXR at launch):

Metal	USD Weight	Launch Price ($/g)	Grams per AUXR
Gold	55%	145.00	0.3793
Silver	30%	2.26	13.2743
Platinum	10%	60.00	0.1667

Palladium	5%	45.00	0.1111

Note: USD weights drift naturally with spot prices after launch; the gram quantities per AUXR are fixed. NAV per token floats with live metal spot prices applied to these fixed grams.

3.2 Backing and Hedging Status

The issuer manages the metal-price exposure created by outstanding AUXR through:

- Positions held with banks in basket proportions, placed manually, with no automated connection to those banks.
- Other regulated counterparties or instruments may be added, and this document will be updated if they are.

Status as of this version: the founder states that exposure is hedged manually through banks in basket proportions. There is no automated connection to those banks, and no hedge statement has been published or independently verified. Any unmatched exposure remains with the issuer, and holders rely on the issuer's ability to settle at NAV. AUXR is not individually redeemable for physical bars.

3.3 Net Asset Value

NAV per AUXR is derived from live metal spot prices applied to the fixed basket grams and is published at vault.auxite.io/api/auxr/price. NAV is the reference price for primary issuance and redemption and for market making. Prices on exchanges are set by trading and can differ from NAV, as described in Section 5.

3.4 Issuance, Settlement and Withdrawal

Users of the Auxite app can buy and sell AUXR at NAV plus or minus 125 bps. Sale proceeds are credited to the user's in-app balance. A facility allows authorised participants to create and redeem at NAV plus or minus 25 bps, subject to caps and a registered destination address, but no participant is currently registered. Limited pre-minted inventory may be held for this purpose.

Moving AUXR out of the app to an external wallet requires completed KYC. New on-chain mints are queued for a signature by the admin Safe, which can take hours. A holder who bought AUXR on an exchange can settle at NAV only through an Auxite account, and deposits from unrecognised addresses may wait for manual review. There is no contractual right to settlement at NAV on any exchange.

3.5 Supply

AUXR is minted on issuance and burned on redemption. On 5 November 2026 on-chain total supply was 49,411.63 AUXR, distributed as follows: 23,100.00 at 0x8d23E12cAc0f1D2a8c609b973f394396A4Da5011; 22,691.37 at a Safe controlled by the founder and stated to be owned by him personally; 1,671.41 at a wallet (0x1f8E7da692F37fD8bAc164496D67673e0b9A4Ab1) reported as unauthorised holdings under Hong Kong police investigation, frozen at exchanges and excluded from circulation; 1.00 at the

deployer address; and 1,947.85 in circulation. The issuer also records 2,417.01 AUXR of off-chain balances in its app.

The issuer reports the 23,100.00 AUXR as permanently inaccessible and excludes it from adjusted supply (26,311.63 AUXR): it sits at an address with no private key. The same allocation was re-minted to a working treasury wallet on 30 September 2026, and most of it is now the Safe position. The founder states that metal exists for this allocation; this has not been independently verified. The founder may sell or otherwise use the tokens at the Safe, and the issuer may use its market-making accounts; no lock-up applies.

3.6 In-App Features

The Auxite app allows AUXR to be staked for 3, 6 or 12 months at fixed rewards of 2.0%, 2.5% or 3.0%, subject to minimum and maximum amounts. These rewards are funded by Auxite, not by lease or hedge income, and depend on the issuer's ability to pay them. AUXR can also be used as collateral for borrowing in the app, with liquidation if the loan passes its limits. The issuer may run promotions that pay rewards in AUXR.

4. Custody & Reserves

AUXR holders have no claim on physical metal, and no metal is held in custody on their behalf. Hedging arrangements are described in Section 3.2. The issuer's public report at vault.auxite.io/api/auxr/reserves compares its AUXR liability with its holdings statement. As of this version it shows no holdings statement and does not show AUXR as fully backed. Any figures the issuer publishes are self-reported until an independent party verifies them. No bankruptcy-remote structure or trust holds assets for AUXR holders.

5. Market Structure & Liquidity

AUXR/USDT trades on LBANK, Hotcoin, Pionex and Toobit. A third-party market maker provides market making on these venues, operating from accounts of the issuer or its founder. The issuer sets NAV, issues and redeems AUXR and controls most of the supply, which creates a conflict of interest in relation to exchange trading. Order books are thin, and exchange prices can move well away from NAV. On 20 October 2026, a sale of 5 AUXR on LBANK moved the price from 87.35 to 62.81 USDT against a NAV of 87.24. On 5 November 2026, depth within 2% of the mid-price was about USD 430 to USD 530 per side on each venue.

6. Compliance & Regulatory Posture

- AUXR is offered under Regulation S (offshore) and is not offered to United States persons. Automated US-person restrictions, based on KYC country and IP address, apply to card funding, fiat withdrawal, crypto withdrawal and stablecoin conversion. These restrictions do not yet cover the AUXR buy, sell and on-chain withdrawal routes. The issuer does not control who trades AUXR on third-party exchanges.
- Identity verification is performed through a third-party provider. Users who have not completed KYC can buy up to USD 500 per transaction and USD 1,000 in any 30 days. KYC is

required above those limits and to move AUXR out of the app to an external wallet. Purchases below those limits therefore take place without full KYC.

- No regulator has reviewed or approved AUXR or this document, and the issuer does not rely on any published legal opinion on AUXR's regulatory status.
- The issuer is Aurum Ledger Limited. Its founder is its ultimate beneficial owner, with 100% of the voting rights and ultimate control over management; its registered shareholder and sole director is a nominee. Treasury and reserve decisions are therefore not subject to independent oversight.

7. Governance & Contract Security

The AUXR contract is non-upgradeable, and its source is verified on Basescan and Sourcify. The admin, minter and pauser roles are held by a 2-of-3 Safe multisig (0xEdC9163c5f8A2a76BD1CdDa6BAA4Eb576B481070). All three Safe keys are currently held by one person, so the Safe does not provide approval by separate individuals. The application's former hot wallet no longer holds a minting role. The contract can be paused, which halts all transfers for all holders. It has no blacklist, freeze or seizure function, so tokens released to an address cannot be recovered by the issuer. No independent smart-contract audit has been published. The issuer intends to publish an independent audit report and an independent reserve report in Q1 2027.

7.1 Security Incidents in October 2026

On 11 October and 19-20 October 2026, an unauthenticated debug endpoint on the issuer's platform was used to fabricate off-chain balances. Those balances were then withdrawn through the issuer's own minting process. In total, 897.205 AUXR was created without consideration, worth about USD 78,270 at the NAV on 20 October 2026. The attacker did not obtain any private key, and the smart contract itself was not altered. A flaw in a separate platform endpoint, which allowed a refund to be repeated, was also identified in October. The founder reports that it caused no loss.

The issuer removed the endpoint on 20 October 2026, froze the accounts involved, reset the fabricated balances to zero and moved all minting to the Safe. It reported the matter to the police and to LBANK. Part of the tokens was sold on an exchange, and the issuer has no technical means of recovering tokens already released. The founder states that part of the tokens has been recovered and the remainder is frozen at LBANK. The matter remains under investigation. On 5 November 2026, 1,671.41 AUXR at wallet 0x1f8E7da692F37fD8bAc164496D67673e0b9A4Ab1 was reported as unauthorised and frozen at exchanges, and 20 AUXR remained at an external address.

8. Risk Factors

- Market risk — the value of AUXR moves with precious-metal prices and basket weighting.
- Hedging and backing risk: AUXR obligations are not backed by allocated metal, and the issuer's hedge positions have not been independently verified. If metal prices rise and

positions are unmatched, the issuer's cost of settling at NAV rises with them. Derivative hedges may diverge from spot.

- Issuer and counterparty risk: holders rely on the issuer's ability and willingness to settle at NAV and have no claim on specific assets. In the issuer's insolvency, holders may lose some or all of their value. Holders also rely on exchanges and any future brokerage partners.
- Liquidity and price risk: secondary-market depth is thin and depends mainly on the issuer's own market making. Exchange prices can move well away from NAV, and exchanges may suspend trading, deposits or withdrawals.
- Regulatory risk: AUXR could be treated as a security, derivative, asset-referenced token or other regulated instrument in some jurisdictions. That could restrict its sale, trading or settlement or require the issuer to obtain licences it does not hold.
- Technical and security risk: the contract has not been independently audited, and the issuer's platform has suffered security incidents (Section 7.1). Further flaws could lead to unauthorised issuance, loss of value or interruption of service.
- Control and concentration risk: one person currently controls the issuer and all Safe keys, and the issuer holds most of the adjusted supply. Sales by the issuer, or the loss or compromise of those keys, could materially harm holders.
- Conflict-of-interest risk: the issuer sets NAV, issues and redeems AUXR and engages the market maker, which may conflict with holders' interests.
- Reward risk: staking and promotional rewards are paid by the issuer, not from investment income, and may be changed, suspended or unpaid.

9. Disclaimer

This document is provided for information purposes only and does not constitute an offer or solicitation to any person in any jurisdiction where such offer or solicitation is unlawful. AUXR is offered under Regulation S and is not offered to United States persons. Precious-metal and digital-asset investments carry risk, including the loss of all capital. Nothing herein is financial, legal or tax advice. Figures, addresses and structure are current as of the version date and are subject to change.
